LEARNING EXCELLENCE

ACCELERATE TRAINEESHIP PROGRAM

ICT30515 – CERTIFICATE IN TELECOMMUNICATIONS TECHNOLOGY

UNIQUE TRAINING
OPPORTUNITY

Are you looking for a new direction in your career?
It's time to *accelerate* your career aspirations with
the right training and development program to
achieve ultimate success.

This is the opportunity for you!

The Challenge:

The reduction of historic industry training program (*Telstra™*) and the added pressure for more resources to construct and maintain the *nbn™* has resulted in a critical skills shortage nationally.

For those contemplating entry into the Telecommunications sector, the time is now. With demand for industry trained candidates continuing to increase, remuneration is also taking a commensurate direction.

Despite this, what is the best pathway for successful entry? Paying upfront for training with the uncertainty of finding a suitable employer on completion, or alternatively ap-

plying for a traineeship where you are paid to learn whilst gaining valuable hands-on experience with supportive, industry leading employers?

The Solution:

Due to a critical skills shortage in the Telecommunications sector, demand remains high for new entrants keen to launch a new career direction.

However without the necessary technical skills and experience, what is the best path for entry? **Pay for training or get paid to learn & work?**

Our Capabilities:

Perpetual Learning provides customised training programs for targeted Telecommunication-centric traineeships that ensure today's technical skills and technologies are effectively transferred to the learner. Our superior capabilities stem from:

- Strong relationships with industry experts / networks, ensuring we are fully informed of the latest changes and trends before they happen
- Extensive industry consulting expertise within the Telecommunications industry throughout the Asia-Pacific region
- Ability to leverage off our extensive industry experience to customise superior training programs that directly align with the demands of industry today.

Through our **Accelerate** traineeship program, we partner with key industry networks to meet current and emerging industry needs.

Phase 1: Selection

Candidate Search

Pre-Training Suitability: Learning Assessment

Employer Interview

Pre-Selection/Approved Selection Criteria: Police/Health Checks

Employer Approval

Traineeship Program Commencement

Class Training 3 weeks

Phase 2: Initial Training

Our Syllabus:

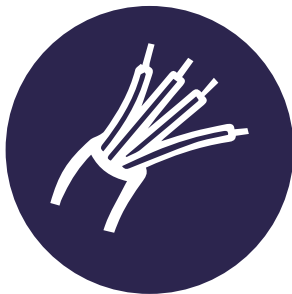

Technology streams are selected based on the employers business need. All training programs are developed to maximise the effectiveness and productivity of the learner.

Our technology-centric learning streams include 3 key foci:

1. Optical:

The fibre optic learning stream will ensure learners obtain the knowledge and associated skills needed to construct today's modern telecommunications networks (NBN). This will include low and high fibre cabling architectures, stranded and ribbon fibre; and all associated testing and fault finding industry principles. This module also covers off associated customer service activation, hardware and performance optimisation techniques.

2. Copper:

The copper network learning stream ensures learners understand the specific architectures of Australia's copper access network. This includes pressurised and non-pressurised copper cabling, jumpering techniques, active network services, cutovers & service activation and associated network fault finding techniques.

3. HFC:

The HFC network stream will ensure learners have the knowledge to complete service installation and activation of the HFC network and remedy performance concerns associated with customer activation techniques including RF leakage, noise induction and other common services affecting quality conditions.

Field-Based Workforce Mentoring – 3 months

Class Training 2 weeks

In-Field Resource Deployment – 4 months

Advanced Learning / Compliance Assessment 1 week

Compliance Assessment Audit 2 days

Certificate Issued

Our Service

Our comprehensive **Accelerate** Traineeship program:

- Connects new entrants with key industry networks
- Offers opportunities to train, learn and earn an income concurrently
- Provides a superior training syllabus - with over 500 individuals already industry trained
- nbn™ training panel accredited
- Focuses on job outcomes, not simply training.

On completion of your 12-month traineeship, you will have a nationally recognised qualification (ICT30515) and vital hands-on industry experience.

Summary:

At **Perpetual Learning** we provide outcomes to benefit both the employer and the learner. We offer solutions that mitigate risk and streamline employment pathways by providing:

- Complete RTO compliant training
- Comprehensive compliance management
- Fully compliant resources with OH&S and industry specific certifications
- Entirely project managed by leading Staffing solutions provider
- Mutually beneficial outcome for both the learner and employer
- Supported Government funding options.

Contact us at www.perpetual.edu.au to find out more about our Traineeship program or call **1800 256 838** and our friendly **Perpetual Learning** team will be happy to assist you with your queries.

As at July 1, 2017:

Perpetual Learning Institute Pty.Ltd. previously known as **Celemetrix** Training, was rebranded as a stand-alone entity to establish itself as a business business providing dedicated focus and ultimately a more rewarding customer experience; a proven philosophy that has cemented our superior reputation in the industry since 2003.

Perpetual Learning will continue to operate as usual providing excellence in training for a range of nbn™ and Telstra™ Approved courses, as well as other specialised Telecommunications focussed traineeships.
